

Akkermansia muciniphila

Product Information

Cat#	PRBT-101
Description	Akkermansia muciniphila is a Gram-negative anaerobic mucus-layer-degrading bacterium that colonizes the intestinal mucosa of humans and rodents. It is a common resident of the human gut, representing approximately 1%–3% of the total gut microbiota and believed to contribute to intestinal health and glucose homeostasis. Akkermansia muciniphila is a potential next-generation probiotic bacterium.
Appearance	White to light yellow-free-flowing powder
Form	powder
Activity	10 billion CFU/g or more
Stability	24 Months
Storage	Recommend storage at frozen temperature (-18 °C) or lower in original, sealed package away from light.
