

Bacillus Licheniformis Freeze-drying Powder (feed grade)

Product Information

Cat#	PRBT-102
Description	Bacillus licheniformis is a Gram-positive, endospore-forming organism that can be easily isolated from soil and plant samples. Bacillus licheniformis produces several classes of antimicrobial substances, including bacteriocins. The unique capability of B. licheniformis to synthesize and produce a range of different antibacterial compounds means that this organism can act as a natural universal vehicle for antibiotic substances in the form of probiotic cultures and strains to combat various types of pathogens, including mycobacteria.
Appearance	White to light yellow-free-flowing powder
Form	powder
Activity	10 billion CFU/g or more
Stability	24 Months
Storage	Recommend storage at frozen temperature (-18 °C) or lower in original, sealed package away from light.
