Bacillus licheniformis for agricultural use

Product Information

Cat#	PRBZ-002
Description	Bacillus licheniformis is a Gram-positive thermophilic bacterium commonly found in soil. When applied to soil, it rapidly multiplies, colonizes space, and maintains its characteristics in highly acidic environments. It increases beneficial microbial populations in soil, improves the rhizosphere environment, promotes plant growth, and inhibits the proliferation of harmful microorganisms.
Applications	Biofertilizer for crops.
Form	Slightly fermented pale yellow powder
Activity	100 billion CFU/g
Storage	Store in a sealed, cool and dry place.
Warnings	Do not use simultaneously with fungicides, antibiotics or disinfectants. Store in a cool and dark place to avoid strong sunlight exposure; After opening, promptly seal the unused product with a cap.
