Paenibacillus polymyxa for agricultural use

Product Information

Cat#	PRBZ-004
Description	Paenibacillus polymyxa is a highly effective biocontrol and growth-promoting bacterium. It secretes multiple extracellular antimicrobial substances that inhibit the activity of various pathogens, significantly enhancing plant disease resistance. This bacterium effectively prevents soil-borne diseases while promoting plant growth and increasing yields. Following large-scale application nationwide, it has demonstrated remarkable efficacy and outstanding performance, earning widespread recognition.
Applications	Suitable for various crops as biological fertilizers, biological organic fertilizers, and compound biological fertilizers.
Form	Yellow-brown powder
Activity	1 billion CFU/g
Storage	Store in a sealed, cool and dry place.
Warnings	Do not use simultaneously with fungicides, antibiotics or disinfectants. Store in a cool and dark place to avoid strong sunlight exposure; After opening, promptly seal the unused product with a cap.
